

Turismo Venatorio

APP FUNCTIONALITY

Turismo Venatorio

Turismo Venatorio

TOKENBEARER: 328d1eb5d17d979fa5791371a7c929c6

The functions of the app point by point are explained below:

1. App opening:

When the app is opened it must be called the splashScreen function which returns the logo and an image

2. After opening (1st step)

Every time the app is opened (even when it is opened from the background) it must call the userStatus function to check if the company is still active or blocked.

If the status is false I show the message in error_message with a popup and the only operation that the user can do is "Settaggio"

3. After opening (2nd step)

I call the home function which returns the logo and info text

4. Navigation

- **SETTAGGIO:**

From "Settaggio" I access a form where I can login.

On confirmation with the "Invia" button, you must call the userLogin function

If it returns status = true the userToken must be stored in the app, otherwise I see the message in error_message with a popup.

- **SCANSIONE QR CODE:**

Must call the userStatus function to check if the company is still active or blocked.

If the status is false, I get the error message with a popup and go back to the main screen

The app must scan a qr code and open the following page through a web view:

<http://turismovenatorio.it/app/qr-gusti-venatori.php?tokenAccess=<TOKENACCESS>&tokenAv=<TOKENAV>&voucher=<VOUCHER>>

TOKENACCESS: 1111c1ff2dccc1be94d100188d5db0c2

TOKENAV: is the Company token that returns the userLogin

VOUCHER: is the code received from the qr code scan

- **NUOVA REGISTRAZIONE:**

Must call the userStatus function to check if the company is still active or blocked.

If the status is false, I get the error message with a popup and go back to the main screen

The app must open the following page in a web view:

Turismo Venatorio

<http://turismovenatorio.it/app/nuova-registrazione.php?tokenAccess=<TOKENACCESS>&tokenAv=<TOKENAV>>

TOKENACCESS: 1111c1ff2dccc1be94d100188d5db0c2

TOKENAV: is the Company token that returns the userLogin

WARNING: in every web view screen, a button must appear to return to the main screen with the word "Back"
